

0.1 Some equations

Here is a linear equation

$$y = x + 2 \tag{0.1}$$

That is very interesting. However, the quadratic equation

$$f(x) = ax^2 + bx + c \tag{0.2}$$

is far more complex. Come to think of it, I actually *do* enjoy

$$y = x + 2 \tag{0.1}$$

above (0.2).
