

Ivan Valbusa

The
fontsize
package

v0.8.4 – 2021/05/21

The serif typeface is Cochineal, created by Michael Sharpe on the basis of Sebastian Kosch's Crimson. The typewriter font is Inconsolata, designed by Raph Levien and the sans serif text is typeset in Linux Biolinum, created by Philipp H. Pol.

User's guide to fontsize

A small package to change the font size

v0.8.4 – 2021/05/21

Ivan Valbusa

ivan dot valbusa at gmail dot com

Abstract

The fontsize package allows you to set arbitrary sizes for the main font of the document and to adjust the line spacing accordingly. It also provides new font sizing commands and lets you generate your own .clo file for better tuning.

Contents

1	Usage	3	2	Known issues	10
1.1	Options	4	3	The Code	10
1.2	Commands	4			
1.3	New font sizing commands	5			
1.4	Some text samples	8		References	35

Credits

The code is an excerpt of the scrextend and scrfontsizes packages (Neukam et al. 2020), with few minor changes to make it completely independent of the KOMA-script bundle and with a couple of new features. The package is updated to version 3390 2019-11-18 17:09:35Z of the scrkernel-fonts.dtx file.

Caveat

Although effective with any value of the font size (as long as the font is scalable), the package is meant for small font size changes. For truly optimal results you should (re)define your own .clo file. In fact note that the file generated with \generateclofile, as well as the macros redefined via \changefontsize, are a subset of the standard .clo files.

1 Usage

The package can be loaded, as usual, with:

```
\usepackage[<options>]{fontsize}
```

1.1 Options

fontsize = $\langle\text{fontsize}\rangle$ default: 10pt

Sets the normal size to $\langle\text{fontsize}\rangle$ and the normal line spacing to $1.2\langle\text{fontsize}\rangle$. The other sizes (`\tiny`, `\scriptsize`, ecc.) and line spacings are set proportionally. You can use any unit recognized by T_EX and you can omit the unit as well (in which case it defaults to pt).

Note that `fontsize` does not redefine some commands of the standard `.clo` files such as those related to the page layout and few others. For example the 12pt class option redefine `\Huge` (via `\let\Huge=\huge`) which is not redefined by `fontsize=12pt`. For these reasons, if possible, you should always set a font size class option that comes close to the one loaded by the package. For example with `fontsize=12.2pt` you should load the 12pt class option.

parindent = $\langle\text{dimen}\rangle$ default: $1.5\langle\text{fontsize}\rangle$

Sets the value of `\parindent`. You can use any unit recognized by T_EX but for consistency it is preferable to use a font-dependent unit such as em.

Note that the "em" is simply an arbitrary unit that comes with a particular font. The value of `\parindent` given in ems depends on both the font used and on how or where it is set: whether before or after `\begin{document}`. For this reason, don't expect 1 em to always be equivalent to the currently specified $\langle\text{fontsize}\rangle$. If you don't like this behavior, use absolute units such as pt, cm or mm.

cloname = $\langle\text{name}\rangle$ default: `fontsize`

If declared *before* `fontsize`, it loads the file named $\langle\text{name}\rangle\langle\text{fontsize}\rangle.clo$ to setup the font sizes. This file can be generated through the `\generateclfile` command (see below).

1.2 Commands

\changefontsize[$\langle\text{baselineskip}\rangle$]{ $\langle\text{fontsize}\rangle$ } iff $\langle\text{baselineskip}\rangle \geq \langle\text{fontsize}\rangle$

Sets the normal size to $\langle\text{fontsize}\rangle$ and the normal line spacing to $\langle\text{baselineskip}\rangle$. The other sizes (`\tiny`, `\scriptsize`, ecc.) and line spacings are set proportionally. If the first optional argument is omitted, the command has the same effect of the `fontsize` option. You can use any unit recognized by T_EX and you can omit the unit as well (in which case it defaults to pt).

```
\changefontsize[13.5pt]{11.5pt}
```

\generateclfile{ $\langle\text{name}\rangle$ }[$\langle\text{baselineskip}\rangle$]{ $\langle\text{fontsize}\rangle$ } iff $\langle\text{baselineskip}\rangle \geq \langle\text{fontsize}\rangle$

Generates a file named $\langle\text{name}\rangle\langle\text{fontsize}\rangle.clo$ in which the normal size is $\langle\text{fontsize}\rangle$ and the normal line spacing is $\langle\text{baselineskip}\rangle$. The other sizes (`\tiny`, `\scriptsize`, `\small`, ecc.) and line spacings are set proportionally. You can use any unit recognized by T_EX and you can omit the unit as well (in which case it defaults to pt). If `cloname= $\langle\text{name}\rangle$` and `fontsize= $\langle\text{fontsize}\rangle$` , the generated file will be automatically used to setup the main sizes.

In fact the .clo file is only needed if you intend to modify it. In this case remember to comment the command, otherwise the edited file will be overwritten.

```
\usepackage[cloname=fs,fontsize=11.5]{fontsize} % loads fs11.5.clo
\generateclfile{fs}[13.5]{11.5} % creates fs11.5.clo
```

`\printsamples{⟨baselineskip⟩}{⟨fontsize⟩}[⟨sizes⟩]` iff $\langle\text{baselineskip}\rangle \geq \langle\text{fontsize}\rangle$

A command thought to test the `fontsize` settings. It prints a text sample for every size given in the third optional argument. If this argument is omitted, it prints a sample for each available size. See the examples on page 8.

```
\printsamples{13pt}{11pt}[normalsizer,normalsizerr,normalsizerrr]
\printsamples{13.5pt}{12pt}
```

`\sampletext{⟨text⟩}`

Defines the `⟨text⟩` to be used by `\printsamples`.

1.3 New font sizing commands

The package provides three additional font sizing commands for each standard size (plus the new `\HUGE` command). See table 1 for details.

If you want these commands to work as expected, the font must be smoothly scalable. This is the case of many Type 1 and Open Type fonts such as Cochineal used in this document (Sharpe 2020), but if the font has optical sizes, unusual things can happen: some larger sizes may appear smaller. For example, with the Latin Modern typeface (Jackowski and Nowacki 2009) a similar situation can be encountered when normal size is set to 12 pt:

<code>\largerr</code>	15.84 pt	Hello world	
<code>\larger</code>	15.12 pt	Hello world	
<code>\large</code>	14.40 pt	Hello world	

In fact the font used for the `\larger` ‘Hello world’ is bigger than that used for the `\large` one. This optical effect is due to the minor thickness of the stems, which makes the words appear shorter and clearer, but not less high (as you can see in the figure on the right which shows the letter H appropriately scaled to see the differences better).

Table 1: The value of all available sizes (rounded to the second decimal place) relative to `\normalsize` ranging from 8 pt to 12 pt with increments of 0.5 pt. The first row of each size shows the font size; the second row (colored in gray) shows the default line spacing

1.4 Some text samples

The following samples are obtained with the \printsamples command (see section 1.2):

```
\printsamples{12.6pt}{10.6pt}[normalsize,normalsize,normalsizeerr,
normalsizeerr,large,larger,largerr,largerr]
```

Text samples for \normalsize 10.6pt on 12.6pt

\normalsize: 10.6pt on 12.6pt. As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. As will easily be shown in the next section, reason would thereby be made to contradict, in view of these considerations, the Ideal of practical reason, yet the manifold depends on the phenomena.

\normalsize: 11.1pt on 13.1pt. As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. As will easily be shown in the next section, reason would thereby be made to contradict, in view of these considerations, the Ideal of practical reason, yet the manifold depends on the phenomena.

\normalsizeerr: 11.7pt on 13.8pt. As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of

practical reason are what first give rise to the architectonic of practical reason. As will easily be shown in the next section, reason would thereby be made to contradict, in view of these considerations, the Ideal of practical reason, yet the manifold depends on the phenomena.

\normalsizerrr: 12.2pt on 14.4pt. As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. As will easily be shown in the next section, reason would thereby be made to contradict, in view of these considerations, the Ideal of practical reason, yet the manifold depends on the phenomena.

\large: 12.7pt on 15pt. As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. 2 Known issues

The `parindent` option does not work with classes and packages which sets `\parindent` inside the `\AtBeginDocument` hook (and other hooks). Among these is the `tufte` class (Godby 2015). In such cases you can set the default indentation, for example, with `\setlength{parindent}{\dimen}` declared *after* `\begin{document}`.

3 The Code

The parts added to the basic code of `scrxextend` and `scrfontsizes` are highlighted in blue.

All the options of the package are defined via `xkeyval` (Adriaens 2014), while the `xfp` package (The L^AT_EX Project 2021) provides the `\fpeval` command to use instead of `\dimexpr` for some size calculations. Only two new package options, called `cloname` and `parindent` are defined.

```
1 \ifpackageloaded{xkeyval}{\RequirePackage{xkeyval}}
2 \ifpackageloaded{xfp}{\RequirePackage{xfp}}
3 \DeclareOptionX{cloname}[fontsize]{\def\@fontsizefilebase{#1}}
4 \DeclareOptionX{parindent}[1.5\@tempdimb]{\def\@fontsizeparindent{#1}}
```

Excerpt from `scrxextend.sty` Here the `scrxextend` code begins. All the KOMA related codes have been removed and only a few names have been changed. The value of `\@fontsizefilebase` is set to `fontsize` instead of `scrsz`.

```
5 \DeclareOptionX{fontsize}[10]{%
6   \expandafter\@defaultunits\expandafter\@tempdima#1 pt\relax\@nnil
7   \edef\@tempa{#1}%
8   \setlength{\@tempdimb}{\@tempdima}%
9   \edef\@tempb{\strip@pt\@tempdimb}%
10  \addtolength{\@tempdimb}{-10\p}%
11  \edef\@ptsize{\strip@pt\@tempdimb}%
12  \edef\@tempa{%
13    \noexpand\makeatletter
14    \noexpand\inputIfFileExists{\@fontsizefilebase\@tempa.clo}{%
15      \noexpand\PackageInfo{fontsize}{%
16        File ‘\@fontsizefilebase\@tempa.clo’ used to setup font sizes}%
17      }{%
18        \noexpand\inputIfFileExists{\@fontsizefilebase\@tempb pt.clo}{%
19          \noexpand\PackageInfo{fontsize}{%
20            File ‘\@fontsizefilebase\@tempb pt.clo’ used instead of%
21            \noexpand\MessageBreak
22            file ‘\@fontsizefilebase\@tempa.clo’ to setup font sizes}%
23          }{%
24            \noexpand\changefontsize{#1}%
25          }%
26        }%
27        \noexpand\catcode‘\noexpand\@=\the\catcode‘\@
28      }%
29    \expandafter\AtEndOfPackage\expandafter{\@tempa}%
```

30 }

Now we can execute and process the new options defined above. As `cloname` is responsible for defining `\@fontsizefilebase` it must precede `fontsize` which uses this command. The `\ctm@setlength` and `\changefontsize` commands are simply new names, respectively, for `\scr@setlength` and `\changefontsizes` used in `scrxend.sty`.

```
31 \ExecuteOptionsX{cloname,fontsize,parindent}
32 \ProcessOptionsX*\relax

33 \newcommand*\ctm@setlength[4]{%
34   \ifdim #2<\ifdim #2=\z@ \z@ \else \p@\fi

60   \fi
61   \fi
62   \fi
63 }
64 \providecommand*\changefontsize[2][1.2\@tempdima]{%
65   \@defaultunits\@tempdima#2pt\relax\@nnil
66   \setlength{\@tempdimc}{\@tempdima}%
67   \addtolength{\@tempdimc}{-10\p@}%
68   \edef\@ptsize{\strip@pt\@tempdimc}%
69   \@defaultunits\@tempdimb#1pt\relax\@nnil
```

The value of `\@tempdimc` set in `scrxend.sty`

```
\setlength{\@tempdimc}{\dimexpr (100\@tempdimb / \@tempdima * \p@)}
```

returns an error when the the line spacing is greater than 163.84 pt or the value passed to the fontsize option is grater than 136.53 pt. This is due to the intermediate calculation: $100\backslash\text{tempdimb} = 16\,384\text{ pt}$, which is the maximum dimension that may be stored in plain \TeX and \LaTeX . The problem, which is probably more theoretical than practical, can be solved simply by replacing the above code with this (thanks to Claudio Beccari):

```

70 \setlength{\@tempdimc}{\fpeval{100*\@tempdimb/\@tempdima}pt}%

The KOMA files do not define \parindent and other lengths that are strictly linked to the font rather than to the dimensions of the page and the text. So we first define \parindent which defaults to $1.5\langle\textit{fontsize}\rangle$:

```

412 \setlength\parindent{\@fontsizeparindent}%

```

For the following lengths, all values are calculated proportionally to the main font. I took the bk11.clo file as a reference point. Note that the differences in the lengths affected by fontsize inside the bk*.clo files only concern \headheight, \headsep, \topskip and \footskip.

```

Excerpt from scrfontsizes.sty Here is a portion of the scrfontsizes package. It simply provides the `\generateclofile` command, without the KOMA related definitions. There are no reserved names for the `.clo` files. The name of the command is a new name for the KOMA `\generatefontfile`. In fact what the command generates is a `.clo` file.

```

545 \newcommand*{\generateclofile}[1]{%
546   \kernel@ifnextchar [{\@generatefontfile{#1}}{\@@generatefontfile{#1}}}%
547 }
548 \newcommand*{\@generatefontfile}{%
549   \def\@generatefontfile#1[#2]#3{%
550     \begingroup

```

At least starting from version 3.31 of scrfontsizes, the code of the `\@generatefontfile`

and \@@generatefontfile commands sets the \parskip value to 0pt. We also use [#2] in place of [{#2}] for the optional argument of \changefontsize used immediately below.

```

551 \setlength{\parskip}{0pt}%
552 \changefontsize[#2]{#3}%
553 \generate@fontfile{#1}{#3}%
554 \endgroup
555 }
556 \newcommand\@@generatefontfile[2]{%
557 \begingroup
558 \setlength{\parskip}{0pt}%
559 \changefontsize{#2}%
560 \generate@fontfile{#1}{#2}%
561 \endgroup
562 }
563 \newcommand*\@@generatefontfile}[2][{}]{

1082\def\fs@sampletext{%
1083  As any dedicated reader can clearly see, the Ideal of practical reason
1084  is a representation of, as far as I know, the things in themselves; as
1085  I have shown elsewhere, the phenomena should only be used as a canon for
1086  our understanding. The paralogisms of practical reason are what first give
1087  rise to the architectonic of practical reason. As will easily be shown in
1088  the next section, reason would thereby be made to contradict, in view of
1089  these considerations, the Ideal of practical reason, yet the manifold
1090  depends on the phenomena.}

Change History

v0.1	General: First public release 1	v0.7	General: New font sizing commands \HUGE, \HUGEr, \HUGErr, \HUGErrr. Changed default name for the .clo file to fontsize. Updated documentation. 1
v0.2	General: Updated documentation and code comments. 1	v0.8	General: Corrected a bug occurring when the line spacing is grater than 163.84 pt. 1
v0.3	General: Added definitions of some lengths omitted from KOMA-script files: \smallskiamount, \medskiamount, \bigskiamount. Redefined \parindent and \headheight. 1	v0.8.1	General: New \sampletext command. Some lengths are now defined via xfp package. Removed \headheight definition. Updated documentation. 1
v0.4	General: Maintenance release. Updated documentation. 1	v0.8.2	General: New \parindent option. Updated documentation. 1
v0.5	General: New font sizing commands from \normalsize up. New command \printsamples. Updated documentation. 1	v0.8.3	General: Corrected a bug in the \parindent option. Updated documentation. 1
v0.6	General: New font sizing commands from \small down. Updated documentation. 1	v0.8.4	General: Maintenance release. 1

Index
