

Table 1: Some text

Problem	Content	Point
1	Solve the equation $(2x + 3) \cdot \sqrt{4x + 5} + (6x + 7) \cdot \sqrt{8x + 9} = 2.$	1,00
	$\Delta = (-5)^2 - 4 \cdot 1 \cdot 6 = 1,$	0,25
	$x = \frac{-(-5) - 1}{2} = 2.$	0,25
	$x = \frac{-(-5) + 1}{2} = 3$	0,25
	The given equation has two solutions $x = 2$ and $x = 3$.	0,25
