1 Introduction

Emoji (👤: 絵文字) are pictographs (pictorial symbols) that are typically presented in a colorful cartoon form and used inline in text. They represent things such as faces, weather, vehicles and buildings, food and drink, animals and plants, or icons that represent emotions, feelings, or activities.^[1]

In 2019, **Khaled Hosny** has integrated the **HarfBuzz** library into LuaT_EX. While the original purpose is to optimize the rendering of indic and arabic scripts, emoji is also supported by this new version of T_EX at the same time.

 <https://github.com/stone-zeng/latex-emoji>
 xdzeng96@gmail.com

The **emoji** package allows user to typeset emoji in a \LaTeX document. It requires Lua \HBT\TeX : at present, only `lua \LaTeX -dev` can be used to compile. In \TeX Live 2020, `lua \LaTeX` will base on the new Lua \HBT\TeX engine and can be used as well.

2 Basic usage

2.1 Load the package

The package should be loaded in the usual way:

```
\usepackage{emoji}
```

2.2 Set emoji fonts

On Windows or macOS system, the **emoji** package will automatically select available emoji fonts. If the package can't find any emoji fonts, or if you want to change the default font, you can use the following command to set emoji font manually.

```
\setemojifont{\font}[\font features]
```

This command is similar to `\setmainfont` provided by **fontspec**, but only works for emoji. The optional *\font features* should be a key-value list, which is described in the document of **fontspec** package in detail.

You can use this command in the preamble of in the document body. Only emoji afterwards will be affected.

Examples:

```
% Font name
```

```
\setemojifont{Apple Color Emoji}
```

```
% File name with explicit path
```

```
\setemojifont{EmojiOneMozilla.ttf}[Path=./fonts/]
```

2.3 Use emoji

```
\emoji{\name}
```

This is the main command to use emoji. All valid *\name* can be found in [Table 2](#).

Examples:

```
\emoji{joy}
```

```
\emoji{+1}
```

```
\emoji{family-man-woman-girl-boy}
```

3 Technical details

3.1 Fonts

At present, LuaHB \TeX doesn't support OpenType SVG table, so not all color emoji fonts can be used normally. Some typical fonts are listed in [Table 1](#).

Table 1: Typical color emoji fonts

Font name	OpenType table(s)	Bitmap?	Vector?	Support?	Reference
Apple Color Emoji	sbix	✓		✓	
Segoe UI Emoji	COLR/CPAL		✓	✓	
EmojiOne Mozilla	COLR/CPAL		✓	✓	[5]
Twemoji Mozilla	COLR/CPAL		✓	✓	[5]
Noto Color Emoji	CBDT/CBLC	✓		✓	[3]
JoyPixels	CBDT/CBLC	✓		✓	[7]
EmojiOne	SVG		✓	✗	[6]
Twitter Color Emoji	SVG		✓	✗	[4]

This document uses the following fonts:

- Noto Serif
- Noto Sans
- Noto Sans Mono
- Noto Sans Symbols
- Noto Serif CJK JP (源ノ明朝)
- Twemoji Mozilla

3.2 Emoji list

Names in the list are from <https://api.github.com/emojis>.

3.3 🚧 Known issues

The **emoji** package is highly experimental and may have a lot of bugs inevitably. For example:

- Spacing around emoji may be abnormal
- Complex emoji may not combine correctly in some fonts
- The emoji cannot be copied from PDF

If you have any problems when using this package, please create an issue on GitHub or send an email to the author.

3.4 📝 Todo list

The following features may be added in the future:

- Allow direct input of emoji
- Support more names/aliases
- Fulfill the Unicode emoji standard
- Add options including default skin tones, genders, etc.
- Support more fonts
- Automatically fallback
