Table 1: Some text

Problem	Content	Point
1	Solve the equation	1,00
	$(2x+3)\cdot\sqrt{4x+5} + (6x+7)\cdot\sqrt{8x+9} = 2.$	
	$\Delta = (-5)^2 - 4 \cdot 1 \cdot 6 = 1,$	0,25
	$x = \frac{-(-5) - 1}{2} = 2.$	0,25
	$x = \frac{-(-5) + 1}{2} = 3$	0,25
	The given equation has two solutions $x = 2$ and	0,25
	x=3.
